

RATS – The cause of some Building Fire & Health Hazard

It is known that rats sometimes bite into electrical wires of buildings. This may cause fire, destroying billions of dollars of assets, sometimes loss of life. If we can get rid of those rats, we may prevent some fires from happening. It has been estimated that rodents cause up to 20 percent of undetermined fires in the United States each year.

Rats mice and cockroaches spread deadly diseases. Around the world, rats and mice are known to spread over 35 diseases.

- **Plague (*Yersinia pestis*)-** It was in fact the rat flea that spread the bacterial organism leading to the death of one third of Europe's human population in the 1300s.

- **Weil's disease (Leptospirosis)**- Spread from rats to humans via urine, this bacteria proves fatal to people.
- **Q Fever (Coxiella burnetii)**- This bacteria is reported to be the world's most infectious disease.

Rats contaminate and destroy enough food world wide each year to feed 200 million people. According to estimates of the world health organization in the USA rats cause between \$500 million \$1 billion a year in property and health losses.

Traditionally chemicals are used to treat these pests. Today, people are concerned about their health and environment and are steering away from the use of harmful chemicals. A good alternative to control these pests is the Australian Plug-In Pest Free. It is a chemical free pest control device.

Allow us to introduce PLUG IN PEST FREE; the Chemical Free Australian Pest Control Device. This is an easy to use device, just plug into any socket, switch on and it starts to work. This device is a good alternative to the traditional pest control methods using toxic chemicals.

Kindly visit our website <http://www.pestfree.com.my> or our principal's Australian website <http://www.pestfree.com.au> or contact Capt (Rtd) B.C. Kung at 012-2025905 for more information.

Pest Free will continuously repel the rats and cockroaches without any maintenance at all.

The benefits are:

- Effectively repel rats, mice and cockroaches and affects their breeding.
- Scientifically tested by a leading Australian university.
- Independently studied by consultants over 2 years.
- Consumer proven since 1995.
- Chemical and toxic free.
- Environmentally friendly and safer for humans.
- Enhance our safety and prevention against rat caused fire.
- No smell, no mess, no dead pests to dispose of.
- Won multiple awards in Australia.
- HACCP International Endorsed
- Reduce fire hazard caused by rats.

Plug-In Pest Free will get rid of rat and cockroaches in our premises and buildings. This will help reduce the health and fire hazard caused by rats.
