

Singthong Necktie Co.,Ltd. Bangkok

For the past twelve years at our factory in the Lad Prao district of Bangkok, we have had a terrible problem with rats. The factory is 18,000 sq ft over 6 levels and although we tried many different methods of Pest Control over the years including trapping, poison and poison baits. After a period of time these were not effective.

With a certain amount of scepticism we started the program, and at first there appeared to be little happening. However in the third week there was a tremendous amount of activity with rats moving around throughout the factory. Over the next four weeks less and less rats were seen until after two and a half months, only on the fourth level were there a few left.

Now three months later, we no longer have any, and the product has deterred others from settling. This was not a small problem and has taken time to clear but has been completely successful.

We now have a wonderful rat free environment and can thoroughly recommend Plug In Pest Free as a product that has been most effective in ridding us of rats.
