

I would like to congratulate Pest Free on bringing their wonderful products to market.

I have been using the original Pest Free 11 product for years in my homes and the apartment where I am currently living.

Cockroaches and crawling insects are present where ever you live and no matter how fastidious you are at keeping a home clean.

My family and I suffer from allergies so it has never been advisable to have our home sprayed with strong chemicals to eradicate pests.

There was no other option until I tried my first pest free after a problem with German cockroaches.

I was very sceptical about how the product could work but 2 – 3 weeks after I installed my first Pest Free the cockroaches started to disappear and after a month they were completely gone.

Not only did it work on cockroaches but I had a pest free house thereafter despite the fact that we lived right alongside the Lane Cove river bushland and we had a constant influx of creepy crawlies.

I cannot recommend this product enough and I am about to order a new pest free for my apartment and one of their newer products for flying insects.

I have also saved money and spared my family's health by not having to rely on chemical sprays for pest eradication.

Thank you "Pest Free" for inventing this fantastically safe alternative that works!
